

Ensure business success with Sitecore

When building a large-scale enterprise solution based on Sitecore, choosing the right methodology and architecture is critical.

Pentia Professional Services offers counselling from some of the best and most experienced Sitecore consultants in the world, and can help you architect, build and set up a robust, maintainable and highly scalable website.

Professional Consulting Services

Pentia Professional Services can help, amongst other, with the following tasks:

- Help in drawing up enterprise solution architecture.
- Train and counsel development teams.
- Advise on development methodology and best practises.
- Setting up Sitecore in large scale hardware setups.
- Audit existing solutions and recommend actions.
- Integrating Sitecore solutions to other systems.
- Provide highly qualified development resources

Build a successful Sitecore solution

Sitecore is a strong and future proof development platform, but to be able to develop successful and future proof solutions it requires that the architecture and construction of the solution is correct. This requires a deep insight and competence in the Sitecore platform.

Pentia Professional Services can help you to ensure that your Sitecore solution is future proof, scalable and operational. We lead workshops in the planning, architecture or implementation phase, work with your development team to constantly review code and architecture quality or audit solutions and report on actions to take or issues to address.

We believe that making the right choices at an early stage will ensure the success that your business demands. With the vast experience of Pentia Professional Services, we can help you make these choices.

Please contact Core Technology Manager Thomas Eldblom for more information.

With the extensive experience of working with large scale enterprise solutions all over the world, Pentia Professional Services can help you build a successful Sitecore enterprise solution.

We work with your Sitecore integration partner or your development team, to ensure the correct architecture or implementation of your solution.

“ In a large project, you are going to encounter surprises and disappointments. The question is, how big...and how often? ”

Who is Pentia?

Pentia is the leading competence centre when talking about development on or around the Sitecore platform. We are specialist on advising, developing and maintaining web solutions based on Sitecore and Microsoft .NET.

References:

Pentia was founded in 1998 with the goal of developing innovative solutions based on international standards and a deep basic knowledge of core technologies.

Based on the employees comprehensive IT competencies, Pentia deliver consulting services of a high quality. Pentia's main focus is in the content management system Sitecore, where we have over the years delivered more than 150 solutions, to both the public and private market.

Who is Sitecore Professional Services?

Thomas Eldblom is one of the most experienced Sitecore consultants in the world, and has been involved with Sitecore from its very beginning. He has a unique understanding of Sitecore solution-architecture and methodology, and has advised some of the largest corporations and organisations internationally. Thomas Eldblom heads the Core Technology division and is a partner in Pentia.

Jens Mikkelsen has been working with Sitecore and Microsoft .NET in Pentia since 2005. He has been involved in many large scale and complex solutions and has built up a strong knowledge of Sitecore architecture and development. Jens is constantly travelling the world, advising international Sitecore partners and customers.

Both Thomas Eldblom and Jens Mikkelsen are Microsoft Technology Specialists in .NET and SQL Server, and have both been awarded the Sitecore Most Valuable Professional title by

Sitecore Corporation. They blog about Sitecore on their common blog Molten Core (mcore.wordpress.com).
